Patent No. US20020078477A1

GENERAL INFORMATION:
APPLICANT: Chiang, Vincent L
APPLICANT: Carraway, Daniel T
APPLICANT: Smeltzer, Richard H
ITILE OF INVENTION: Production of Syringyl Lignin in Gymnosperms
ITILE OF INVENTION: Production of Syringyl Lignin in Gymnosperms
ITILE REFERENCE: 50617/c-2382.0

CURRENT APPLICATION NUMBER: US/09/796,256A

CURRENT APPLICATION NUMBER: US60/03381

PRIOR PILING DATE: 1996-12-16

PRIOR PILING DATE: 1996-12-16

PRIOR FILING DATE: 1997-12-12

NUMBER OF SEQ ID NOS: 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                               EcoRI adapters (5'OH-AATTCGGCAGGA and 3'GCGTGCTCP) were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction sites of the pBluescript vector. The vector was previously dephosphorylated. The ligated cDNA fragments were transformed into DH10B by electroporation. Library is in LB medium with ampicillin and glyverols. A verage insert size: 800 bp."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              B0452916.1 G1:21256028

                                 /note=Torgan: Root: Vector: pGEM; Forrest roots were inoculated with Fusarium solani f. sp. glycinae and samples were collected after 14 days of inoculation. Total RNA was used for CDNA synthesis using SMART PCR CDNA synthesis kit (CLONTECH, CA). CLONTECH PCR. Select Subtraction system was used to enrich rare transcripts expressed in Forrest roots under inoculation by F. solani and cloned in pGEM vector. ESTS were sequenced using M13 universal forward or reverse primer."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       360
